

## Tired of paying to ship glass? CANS reduce your package weight by 40%

### The Truth About Cans versus Bottles

You can reduce your shipping cost by choosing a lighter package.

With oil over \$100/barrel and gas prices continuing to rise, I'm sure you are concerned about your shipping costs. Well here is a way to save some money and the environment at the same time.

Average weight of a full **12oz bottle**: 620 g

Average weight of a full **12oz can**: 366 g

96 cases (one full 48" x 40" pallet) of 12 oz glass bottles, full weighs **3143 lbs** (not including the pallet).

The equivalent 96 cases of beer in 12 oz cans would weigh **1855 lbs** (not including pallet).

Note: Statistics are for LTL shipments (less than truck lot shipments).

**A saving of 40% on your cost to get your product to the consumer, is a big number.**

Plus, with today's can technology you get the added quality protection cans provide from UV light over glass bottles.

## **And Help Save the Environment as well! The truth about recycling...**

Twice as many cans are recycled than bottles:

- Aluminum can recycling rate: 45%
- Glass bottle recycling rate: 20%

### **Benefits of recycling:**

- It conserves natural resources.
- It reduces the amount of waste that is buried or burnt.
- The most valuable benefit of recycling is the saving in energy and the reduction in greenhouse gases and pollution that result when scrap materials are substituted for natural resources.
